Brian Stevens, Owner

New Seed Maintenance

1. Watering

0-14 Days

First watering, apply enough water to wet soil down to 6-8 inches. Apply gently to avoid washing away seed and pooling water. Until germination of seed, keep seedbed moist (approx. 5-10 minutes per area).

14-45 Days

Keep the top 2 inches of soil moist until grass reaches around 3 inches in height. Reduce watering to twice a week after.

2. Mowing

Wait at least until the grass reaches 3 inches in height to perform the first mowing. Do not take more than 1/3 of the blade height during any mowing. Gradually reach your desired height with each successive mowing.
